

# Privacy and Data Protection

## DATASHEET

The goal of data protection is to prevent unauthorised access to sensitive information and ensure that only authorised personnel can access and use it. This includes protecting data in transit, in use and at rest, as well as protecting data from external threats such as hackers and internal threats such as disgruntled employees.

Our privacy and data protection advisory services provide comprehensive security analysis, assessment, and guidance to minimise the risk of data loss and misuse. We will implement the most suitable framework and controls to protect your data from unauthorised access, use and disclosure, aligned to data privacy legislation, regulations and best practices.

## OUR VALUE PROPOSITION

### Data protection health assessment

We prepare your organisation to defend against a wide range of threats. We conduct risk assessments and analyse your data protection policies and procedures to identify potential risks, vulnerabilities, and threats. We provide guidance and recommendations on how to best protect your data and we design a roadmap with table-top reviews of the data landscape, existing data security controls and capability to protect data at rest, in use and in motion.

### Data protection program implementation

We facilitate and implement the data protection initiatives or requirements, ensuring that your data protection policies and procedures are in line with relevant laws and regulations – helping you stay compliant and avoid costly penalties. We provide guidance and advice on security best practices for data protection, including encryption, authentication, and access control. We provide you with a clear understanding of your data protection security and vulnerabilities through detailed reports and analysis.

### Data discovery & classification

We help facilitate and implement your data discovery and classification initiatives that assist your business in identifying what type of structured and unstructured data is stored across your on-premise and cloud environments and applying the correction classifications. This includes identifying privacy (PI, SPI) data, corporate sensitive data and implement the tools to conduct manual and automated classification.

## HIGHLIGHTS

Frameworks and methods that guide with effectively protecting data and complying with data protection laws. Expert guidance on both Privacy and Data Protection – addressing the similarities and differences.

**Data Protection** shields data from loss or leak by external attackers and malicious insiders.

**Data Privacy** governs how personally identifiable data is collected, shared and used.

- Unique and combined focus on both privacy and data protection
- Services that can be tailored to SME and enterprise
- Experts that have a deep understanding of leading data protection technologies
- Services and expertise that meet the requirements for different regions i.e., Europe, Africa.

## KEY FEATURES

- Clarity on Regulatory/ Compliance Obligations
- Achieving compliance with privacy laws & regulations
- Clarity on your organisation's data security compliance obligations
- Guidance on the best strategic approach based on your compliance impact, risk and business requirements
- Prioritisation of initiatives and resources based on your crown jewels
- Detailed plans to execute DLP and related initiatives
- Assistance with response to a data breach

# OUR VALUE PROPOSITION

## Privacy readiness assessment

We provide a view of the organisation's ability to comply with current and upcoming regulations. We adopt a roadmap approach to assess the capability, identify gaps, and provide recommendations to achieve privacy and regulatory compliance.

## Privacy program implementation

We implement and manage privacy compliance programs on both a short-term and long-term basis, guided by our privacy experts covering legislation such as UK/EU GDPR, South African POPIA and the Mauritian DPA.

## Data subject access request (DSAR)

We review your data landscape and related data classification, labelling, retention, archiving, and backups in place to identify gaps and provide recommendations. We assist with responding to a DSAR request through setting up a DSAR process and have our own tool that helps you discover and manage requests effectively.

# KEY BENEFITS

## Enhanced data protection

Our services help you protect your data from unauthorised access and misuse.

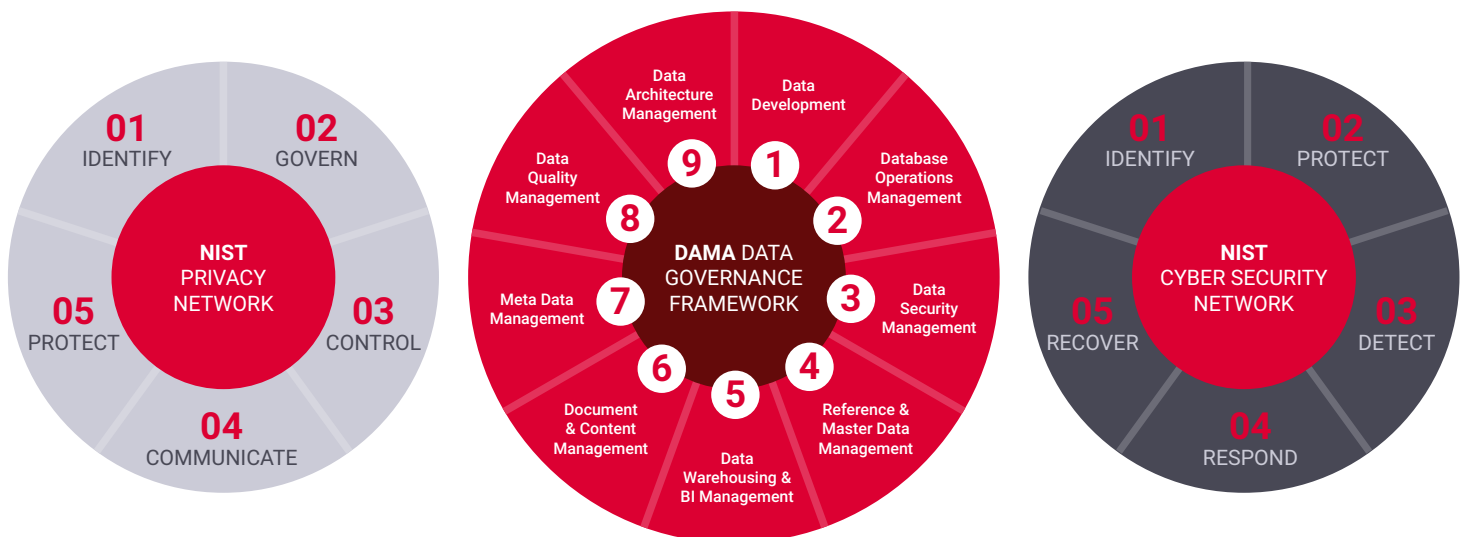

## Improved risk mitigation

Our team will help you identify potential risks and vulnerabilities, and provide advice on how to mitigate them.

## Cost savings

Our data protection security advisory services can reduce your data liability and help optimise your data storage.

# OUR DATA PRIVACY FRAMEWORK

# ABOUT US

Founded in 2015, Excellenta Cyber is a leading consulting led cyber security company focused on providing best-in-class, strategic advisory services and innovative technology solutions. We specialise in assisting C-level executives in navigating the complexity of security governance, risk management and regulatory compliance requirements, while bridging the gap between management objectives and the requirements of technical teams.

Our team of consultants and engineers are focused problem solvers with deep technical knowledge and broad industry experience, across many and industry sectors including banking, financial services, retail, airline, government, telco, oil and gas, mining and manufacturing.

The company has an HQ in South Africa, offices in Mauritius and works with clients across Africa and Europe.
